T_EX Live 2010

Features

- ▶ 'complete' - all the free stuff from CTAN
- ▶ multi-platform
- ▶ uniform across platforms
- ▶ practically daily updates
- ▶ DFSG free with a few exceptions

T_EX Live 2010

Features of the new installer

- ▶ Installation from various sources
- ▶ Text and GUI mode
- ▶ Windows == Unix (*cum grano salis*)

T_EX Live 2010

Installation sources

- ▶ DVD
update T_EX Live Manager, noexec
- ▶ Network
- ▶ local (hard disk) mirror of CTAN
- ▶ svn checkout
- ▶ another installation

T_EX Live 2010

Installation sources

- ▶ DVD

T_EX Live Manager

T_EX Live 2010

T_EX Live Manager `tlmgr`

- ▶ installation/removal of additional packages or collections
- ▶ update all packages to the newest versions available
- ▶ backups and restore
- ▶ paper configuration like `texconfig`, but also for Windows
- ▶ managing the installed platforms

tlmgr cont.

- ▶ searching the installed and all available packages
- ▶ list and searching all schemes, collections, packages
- ▶ setting some default values like the installation repository
- ▶ regenerate fmtutil.cnf, language.dat, and updmap.cfg from the information stored in the database and local additions
- ▶ ... permanently growing

T_EX Live 2010

T_EX Live Manager – Syntax

```
tlmgr [opt]... action [opt]... [arg]...
```

With first set of options:

- ▶ `-repository` installation source, see above
- ▶ `-gui` starts the GUI
- ▶ `-gui-lang` should be auto-detected, can be overridden
- ▶ standard options `-help`, `-q`, `-v`, `-version`

T_EX Live 2010

T_EX Live Manager – Syntax

```
tlmgr [opt]... action [opt]... [arg]...
```

- ▶ general actions: search, show, list, uninstall, check, gui, version, help
- ▶ configuration actions: option, paper, generate
- ▶ package management actions: install, update, remove, backup, restore, arch

The search (and show) action

```
tlmgr [opt]... search [opt]... what
```

searches the *locally* installed packages for **what**, either

- ▶ names and descriptions
- ▶ any of the three taxonomy systems as provided by the experimental T_EX Catalogue rework by Jim Hefferon

(special announcement here - available since 2 hours in tlcritical)

Options to the search action

- ▶ `-global` also searches the remote database
- ▶ `-file` searches for file names
- ▶ `-word` only matches full words, not parts of words
- ▶ `-taxonomy`, `-keyword`, `-functionality`,
`-characterization`

Options to the search action

- ▶ `-global` also searches the remote database
- ▶ `-file` searches for file names
- ▶ `-word` only matches full words, not parts of words
- ▶ `-taxonomy`, `-keyword`, `-functionality`,
`-characterization`

```
tlmgr [opt]... show what
```

shows information on the given packages, including taxonomies

Example of searching taxonomies

tlmgr search

```
$ tlmgr search --taxonomy table
alnumsec - Alphanumeric section numbering.
arydshln - Horizontal and vertical dashed lines in arrays and tabulars.
autotab - Generating tabulars from input data.
blkarray - Extended array and tabular.
booktabs - Publication quality tables in LaTeX
...
variations - Typeset tables of variations of functions.
warpcol - Relative alignment of rows in numeric columns in tabulars.
widetable - An environment for typesetting tables of specified width
xtab - Break tables across pages.
youngtab - Typeset Young-Tableaux.
```

Example listing with taxonomies

xtab listing

```
$ tlmgr show --taxonomy xtab
package:      xtab
category:    Package
shortdesc:   Break tables across pages.
longdesc:    Xtab is an extended and somewhat improved version of supertabular; it
             { provides tables that break across pages.
installed:   Yes
revision:    16998
cat-version: 2.3e
cat-date:    2010-02-13 10:06:25 +0100
cat-license: lppl
collection:  collection-latexextra
keywords:    tables
function:    Tables > Typesetting Long Tables
primary characterization: Page-focused > Tables
secondary characterization: Uncharacterized
```

The install action

```
tlmgr [opt]... install [opt]... what
```

installs the package `what` including all dependencies

Options:

- ▶ `-no-depends` do not install dependencies
- ▶ `-no-depends-at-all` do not even install architecture specific sub-packages

The update action

```
tlmgr [opt]... update [opt]... what
```

installs the package `what` including all dependencies

Options:

- ▶ `-list` list packages to be updated (or added) with revisions
- ▶ `-all` update everything
- ▶ `-dry-run` don't actually do it
- ▶ `-backupdir dir` saves a snapshot of the current status to the specified directory
- ▶ `-no-depends`, `-no-depends-at-all` as before

News in T_EX Live 2010

T_EX Live 2010

Partial inclusion of pT_EX Live

- ▶ Thanks to many people present here pT_EX and related programs have been included
ptex, platex, pdvitype, pbibtex,
mendex, makejvf, ppltotf, ptftopl
- ▶ for 2011: upT_EX, and ...???
- ▶ aim: merge pT_EX Live into T_EX Live
- ▶ request: please send me suggestion and correction or information on missing pieces - **please upload to CTAN!!!**

T_EX Live 2010

PDF version level

- ▶ by default all engines and dvi_{PDF}mx now create level 1.5 PDF files
- ▶ higher compression rates
- ▶ loading pdf₁₄ L_AT_EX package changes this back to 1.4
- ▶ or manually set `\pdfminorversion=4`

Automatic eps to pdf conversion

- ▶ pdf(L^A)T_EX now automatically converts EPS to PDF if the `graphics.cfg` configuration file is loaded
- ▶ uses the `epstopdf` package/command
- ▶ should not overwrite existing PDF files
- ▶ manually disable by defining `\DoNotLoadEpstopdf` before the `documentclass` statement

T_EX Live 2010

`\write18` restricted mode enabled

- ▶ announced last year, but pulled in last minute due to security considerations
- ▶ restricted list of programs are enabled (see `texmf.cnf`)
- ▶ can be disabled at install time
- ▶ can be disabled later by
`tlmgr conf texmf shell_escape 0`

Output directory restrictions

- ▶ BibT_EX and Makeindex behave like T_EX itself
- ▶ do not write to arbitrary directories
- ▶ override with environment variable `TEXMFOUTPUT` or the `texmf.cnf` config `openout_any`

T_EX Live 2010

More user visible news

- ▶ new BibT_EX (after 20 years!)
- ▶ XeT_EX supports margin kerning
- ▶ hyph-utf8: all engines share the same patterns
- ▶ patterns for eT_EX: the available hyphenation patterns are now also loaded into the eT_EX-based engines

T_EX Live 2010

More user visible news, cont.

- ▶ tlmgr automatically creates and keeps one backup per package
- ▶ MacT_EX: repackaged T_EX Live for Mac, adds nice GUI for for updating and managing the installation, allows switching of distributions (TL2008, TL2009, TL2010)
- ▶ several (partly new) programs: ps_view, dviout, T_EXworks, xindy, chktex, dvisvgm, bibtexu

$$\sum_{c \geq 0} \binom{n}{c} \binom{m-c}{k-c} = \sum_{k \geq 0} \binom{n}{k} \binom{m-k}{c} = \sum_{k_0, k_1, \dots \geq 0} \binom{n}{k_0 + k_1 + \dots}$$

$$\binom{n}{m} = \sum_{m=2}^n \left[\sum_{k=1}^{m-1} \binom{m-1}{k} \binom{m-k}{m-k} / \Gamma(1) \right]$$

Definition 16.

- (a) Let \mathcal{C} be the set of all Q -cclo's.
- (b) Let $\mathcal{C}_0 = \mathcal{C}'_0$ be the set of all Q -cclo's with singleton
For any $\alpha \leq \omega_1$ let

$$\mathcal{C}_{\alpha+1} = S(\mathcal{C}_\alpha) \cup \mathcal{C}_\alpha \quad \mathcal{C}'_{\alpha+1} = S'(\mathcal{C}'_\alpha)$$

and for limit ordinals $\delta > 0$ let $\mathcal{C}_\delta = \bigcup_{\alpha < \delta} \mathcal{C}_\alpha$, $\mathcal{C}'_\delta = \bigcup_{\alpha < \delta} \mathcal{C}'_\alpha$

- (c) For any $L \in \bigcup_\alpha \mathcal{C}_\alpha$ we define the *rank* of L ($\text{rk}(L)$) as
at which L occurs in $\mathcal{C}_{\alpha+1}$. Similar, we define $\text{rk}'(L)$
the first ordinal α at which L occurs in $\mathcal{C}'_{\alpha+1}$.

```

\documentclass{article}
\usepackage{amsmath}
\begin{document}
is said to be {\lem unsatisfiable}.
\end{definition}
In contrast with classical logic, in Gödel logics
validity and satisfiability are not dual concepts.
However the following relation holds:
 $\mathcal{S}A$  is a positive tautology if and only if  $\mathcal{S}\neg A$  is unsatisfiable.

%It is often very useful to enrich the logics by adding the unary operator
Consider the unary operator
 $\mathcal{S}det$  with the following meaning~\cite{baaz96}:
\begin{cases}
1 & \& \mathcal{S}det A \text{ if } \mathcal{S}A = 1 \\
0 & \& \mathcal{S}det A \text{ otherwise.}
\end{cases}
\end{cases}
\end{document}

%Henceforth we use  $\mathcal{S}V$  when the truth value set is  $V$ 
%is clear from the context.

We will investigate {\lem monadic} Gödel logics (with
and without the operator~\mathcal{S}det) i.e., in which all predicate symbols are
(at most) unary and no function symbol occur. Every Gödel set  $\mathcal{S}V$ 
induces a logic~\mathcal{S}G_V over the language without~\mathcal{S}det and
a logic~\mathcal{S}G_V^{\mathcal{S}det} if  $\mathcal{S}det$  is present.
{\lem Standard Gödel logic} is  $\mathcal{S}G_{[0,1]}$ ; i.e., the logic over
the full real unit interval as truth value set, see, e.g., \cite{hajek,TT}.
We use  $\mathcal{S}G_n$  to denote the  $n$ -valued Gödel logic for  $n \geq 2$ .

```

```

\documentclass{article}
\begin{document}

Abstract. We investigate satisfiability in the monadic fragment of
order  $\aleph_1$  Gödel logics. These are a family of finite- and infinite-valued
Gödel logics where the sets of truth values  $V$  are closed subsets of  $[0, 1]$ 
containing both 0 and 1. We identify conditions on the topological type of  $V$  that
characterize the decidability or undecidability of their satisfiability problem.

## 1 Introduction

Monadic logic is a first-order logic in which all predicates are unary.
Monadic logic is a rather simple fragment: decidable (both the satisfiability
problem and having finite model property). The same is true for many-valued
monadic logics in which a rather complex landscape of open and closed
questions are still open, see e.g. [3,9,10].

The family of (finite- and infinite-valued) Gödel logics is a prototypical
family of many-valued logics. Gödel logics, defined in general over sets of
truth values which are closed subsets of  $[0, 1]$  containing both 0 and 1, are
valued logics which are completely specified by the order structure of the
truth value set. This fact characterizes Gödel logics as logics of comparative truth and
is an important case of so-called fuzzy logics, see [8].

Different choices of  $V$  in general induce different Gödel logics. For
 $V = \{0, 1\}$  the resulting logic coincides with classical logic.

```

- ▶ several (partly new) programs: ps_view, dviout, T_EXworks, xindy, chktex, dvisvgm, bibtexu

Other (not user visible) news

- ▶ translation infrastructure changed to standard .po files
- ▶ automake/autoconf system rebuild
- ▶ lzma → xz
- ▶ multi-threaded kpse
- ▶ no Ω , only \varkappa
- ▶ package can ship their own postinstall and preremove scripts
